Responding to Sensitive Health and Social Issues in Research Interviews

December 19, 2017

Agenda

1. Interpersonal techniques: diffusing difficult situations
2. Role play
3. Supporting one another
4. Relevant policies and procedures
5. Self care

Learning Objectives

- Identify and apply interpersonal approaches to diffuse difficult or sensitive situations
- Understand departmental procedures for managing, debriefing, and reporting incidents
- Learn about and practice self-care

Context¹

- Collecting sensitive research data is typically understood as qualitative (field) research with vulnerable populations
- But these issues can emerge anywhere or any time: we are asking people about their health
- Possible risks to researchers:
 1. From hearing about intensely personal experiences (risk of psychological harm and emotional distress)
 2. From collecting data in homes or other locations (personal safety)

Context¹

- Possible impacts on researchers:
 - Desensitized to own experiences of conducting sensitive research
 - Desensitized to own personal safety
- Universities beginning to address risk management responsibilities within the ethics clearance process
 - Subjective: it is difficult to assess risk
 - Will review our policies and procedures; more work to do

INTERPERSONAL TECHNIQUES

Recognizing Difficult Situations

- Difficult or critical/crisis situations can take a lot of forms, e.g., participant is:
 - Very emotional, tearful, upset
 - Very confused, frazzled
 - Very frustrated, able or unable to verbalize what they want/need
 - Very angry, shouting
 - Expressing threats of physical harm
 - Expressing suicidal thoughts or plans
 - Acting out physically

The Crisis Defusing Process (1-2)²

- **Step One: Awareness**

- Review – the situation, your feelings, location

- **Step Two: Containment**

- Keep your own emotions in check, talk slowly, be ready to disengage

The Crisis Defusing Process (3-4)²

- **Step Three: Recognition**

- Listen & validate
- Remember your role is not to counsel or give advice

- **Step Four: Closing**

- Thank individual for staying connected, work on next procedural step

If a Person Seems to be in Crisis³

Most of what you see in people in crisis is fear. Reducing a person's fear can help de-escalate a situation

- **Remain Calm**
- **Communicate** – ask questions, listen, avoid interrupting
- **Don't criticize or ridicule**
- **Offer choices**

If a Person Seems to be in Crisis³

- **Decrease distractions.**
- **Make a statement** about the behaviour you're observing and ask about it (e.g. *“You seem to be afraid/angry/confused. Is this right?”*)
- **Repeat questions or statements** if necessary
- **Don't assume** what the problem is

If a Person Seems to be in Crisis³

- **Be an ally** to the person
- **Avoid judgmental, authoritative statements**
- **Allow the person as much physical space as you can** – don't stand over them, get too close, or block the doorway
- **Don't shout**
- **Explain clearly** what you are doing and why you are doing it

If You Are Verbally Attacked⁴

- **Mentally: separate yourself from the issues a person is dealing with – it's not you!**
- **Don't defend** yourself or retaliate
- **Deal first with their emotions** – acknowledge
- **Invite** the angered party to continue in a concrete fashion
- Use **reflective listening**
- When they attack you, **recast it** as an attack on the problem

If You Are Verbally Attacked⁴

- **Explore ideas** they offer as legitimate options
- **Ask what could be done now** to improve things
- **Agree** on at least one point
- **“Yes – And”**
- **Repeat** their statement slowly, verbatim
- **Keep silent** and maintain normal eye contact

If a Person Displays Violent Behaviour

- If you are faced with a person who is acting out violently or is threatening to act out:
 - Remain calm
 - Give the violent person space
 - Speak in a non-threatening manner
 - Leave the situation, always facing the respondent

If a Person Expresses Suicidal Ideation

- Be empathetic, listen to their story – follow the crisis tips from earlier in this presentation
- If you feel comfortable, work to gauge the level of risk by asking something like:
 - “Are you planning to do something to hurt yourself?” / “Do you have a plan to carry out these thoughts?”
- Follow the departmental procedures for suicidal risk identification and action

ROLE PLAY

Recognizing Difficult Situations

- Difficult or critical/crisis situations can take a lot of forms, e.g., participant is:
 - Very emotional, tearful, upset
 - Very confused, frazzled
 - Very frustrated, able or unable to verbalize what they want/need
 - Very angry, shouting
 - Expressing threats of physical harm
 - Expressing suicidal thoughts or plans
 - Acting out physically

SUPPORTING ONE ANOTHER

Debriefing

Create opportunities to debrief with your team on informal basis

- Schedule them in to team meetings to discuss emotional burden, management of this, and interviewing skills
- Peer support really important; works well

Debriefing cont'd

Consider if more formal debriefing is necessary

- Request PI supervision (or other expertise)
- Employ strategies of reflexivity and ethical mindfulness⁵
- Training for emotional safety
- Build into ethics (how, when, where to access support)
- Schedule into budgets and timelines

HEALTH SCIENCES
Family Medicine

POLICIES AND PROCEDURES

Relevant Policies and Procedures

1. Critical Incident Reporting
 - >dfmresearch>Systems and Processes
 - >Incident Reporting
 2. Suicidality SOP
 - >in final approval
 3. Home Visiting SOP
 - >under development
- Report any critical incidents or suicidality, or anything else out of the ordinary, to Laura

SELF CARE

Self-Nurturing Activities

- Have breakfast in bed
- Get a massage
- Pet your pet
- Walk on a scenic path
- Take a bubble bath
- Visit a zoo
- Stop and smell some flowers
- Go to the beach
- Take a scenic drive
- Meditate
- Browse in a book or record score for as long as you want
- Visit a museum or another interesting place
- Watch the sunset.
- Relax with a good book
- Play your favourite music and dance to it by yourself
- Go to bed early
- Sleep outside under the stars
- Call a good friend
- Work on a puzzle
- Bake or cook something special
- Go window shopping
- Listen to a positive, motivational recording
- Exercise

- McMaster's Employee and Family Assistance Program (EFAP)
- Confidential counselling available in person, by phone, by video, or online, on topics such as:
 - Family/Childcare/Parenting/
Eldercare
 - Marital
 - Relationships
 - Addictions
 - Anxiety
 - Depression
 - Life Transitions/Change
 - Grief/Bereavement
 - Stress
 - Workplace Issues
 - Financial/Legal
 - Lifestyle
 - Other Personal Issues
